Leveraging Qt in the MeeGo Ecosystem

Zhang Chi
Nokia, Qt Development Frameworks, Greater China

MeeGo™

What is the MeeGo project?

Building a **modern OS with no strings** attached for multiple device segments, merging the **best of Moblin and Maemo**.

Consolidating the **power, resources, and innovation of the leaders** in communication and computing.

Facilitating operating system **convergence**.

MeeGo™

One MeeGo stack for Multiple Segments, Multiple Application Stores, & Multiple HW Architectures

Easy integration to multiple Application Stores

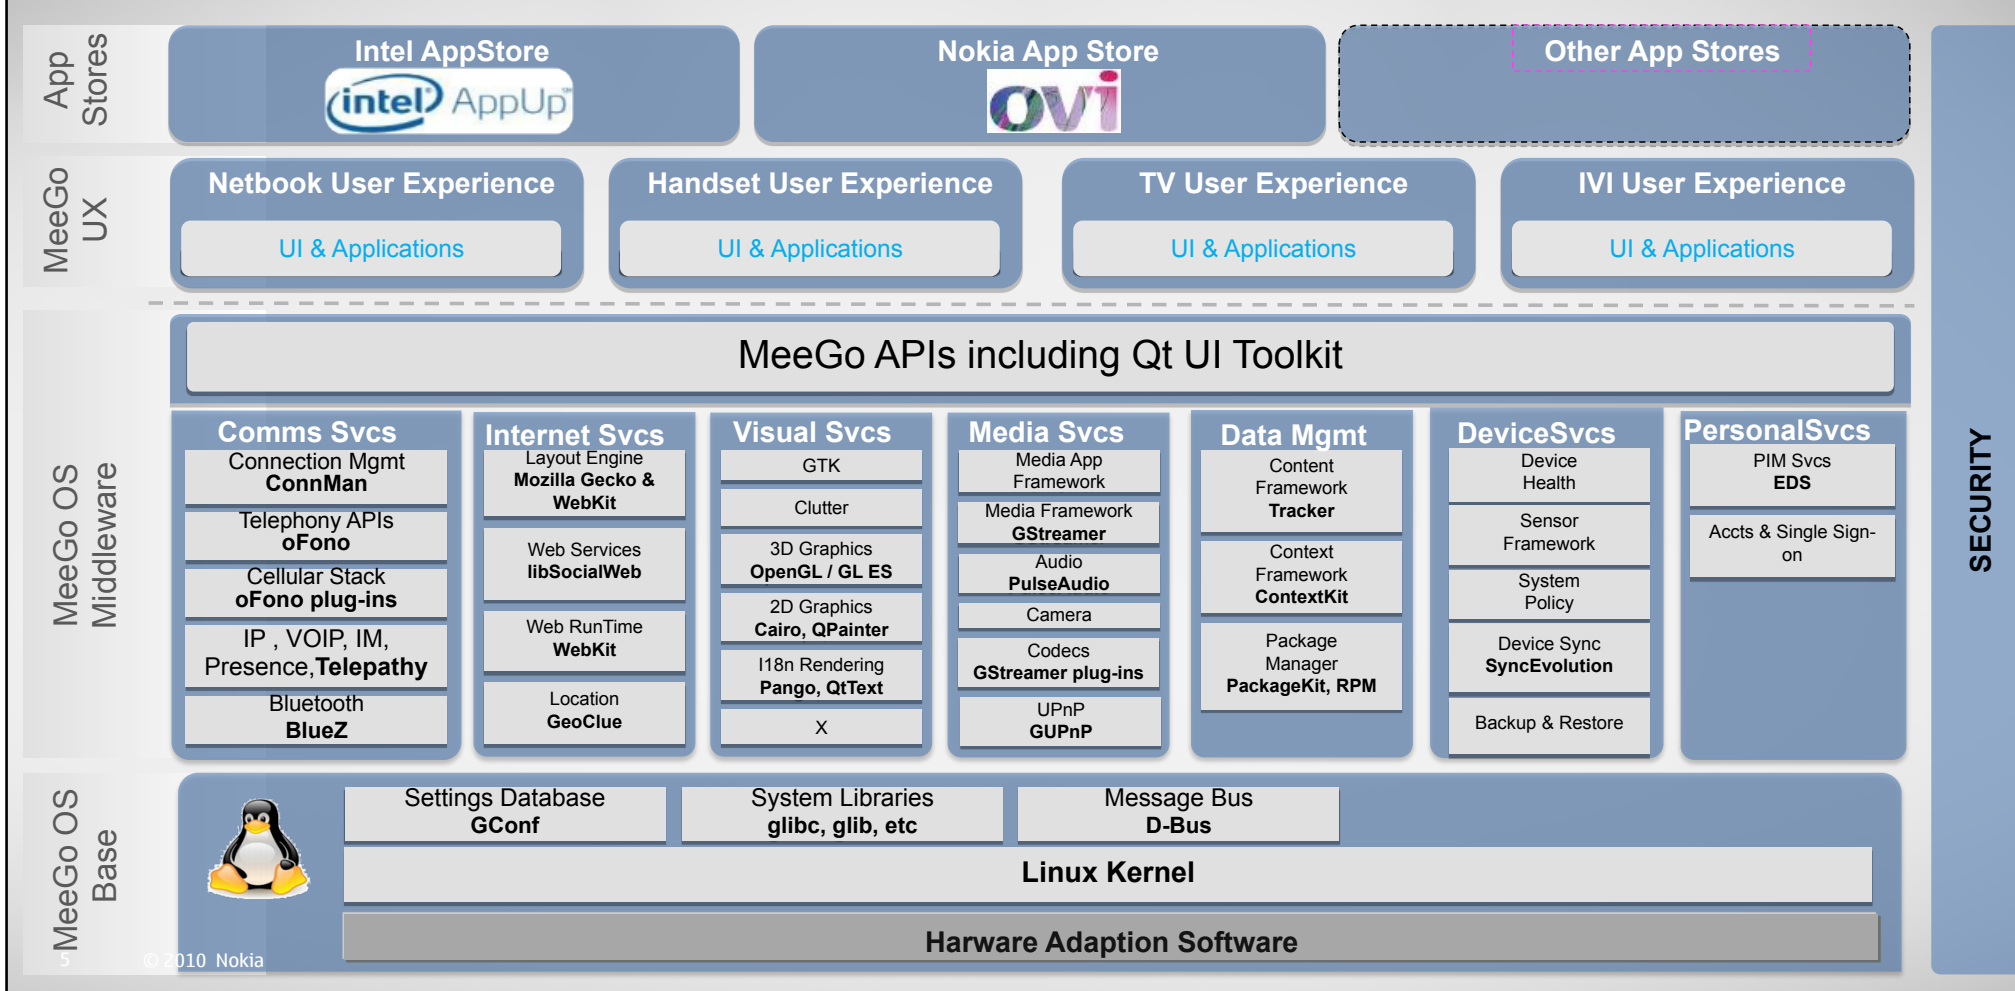

MeeGo OS

Multiple hardware architectures:
Intel Atom, ARM, others

MeeGo Linux Stack is Built on Many Open Source Projects

MeeGo Architecture

MeeGo consumer promise: Personalized Internet on the Go

Delivering the best web experience

- Delivering the leading browser experience
- True Adobe Flash integration

Always online on the Go

- Always-connected software design delivering a prompt-free experience
- Power consumption and network optimization across the whole software stack

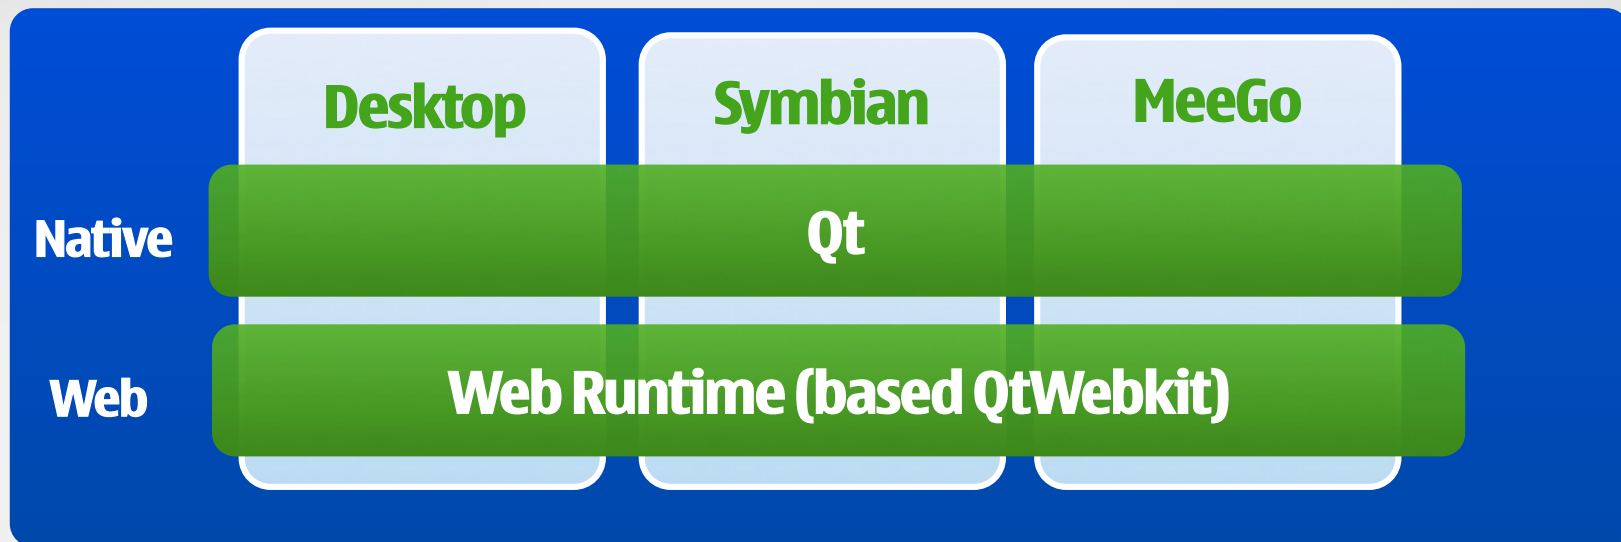

Personalization with Native Applications

- 1,000s of Qt apps leveraging the installed base of MeeGo devices in multiple categories
- Delivered with a renewed experience in Intel AppUp Centers and Ovi Store

Our developer promise: One API – multiple device categories

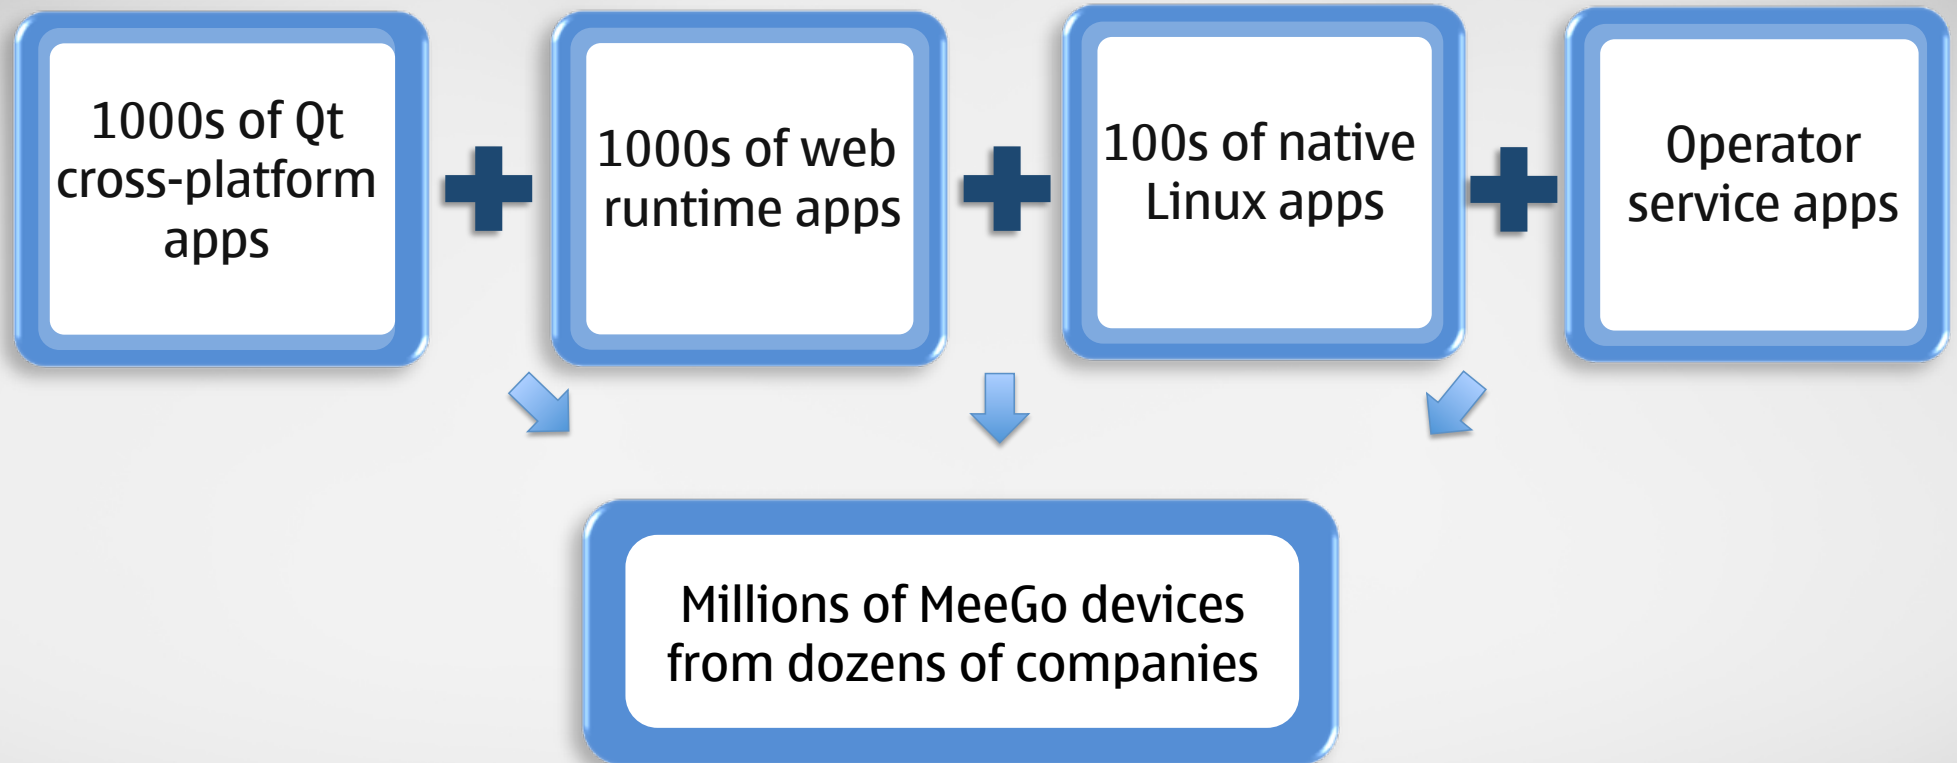

- OneMeeGo API based on Qt
- Fastest growing installed base
- Lightning fast Qt Creator IDE tool
- Global reach of distribution channels with Dedicated go-to-market programs
- Proven Qt track record in CE devices

MeeGo built with Qt expands Developer opportunities

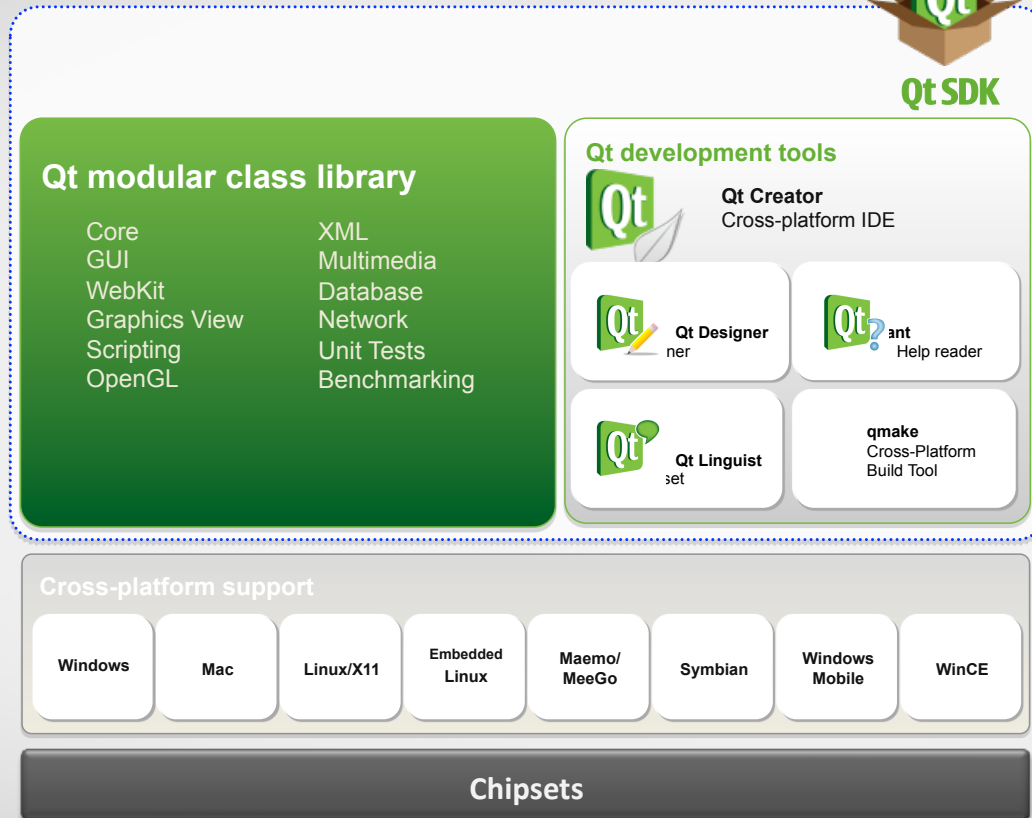

One code base can address multiple consumer screens

MeeGo application ecosystem

Qt Application Framework

Cross platform application development

Desktop, **web**, mobile and embedded software development

Fast, efficient programs

Allows developers to focus on **value added functionality** instead of infrastructure code

Used by more than **350,000** developers around the globe

Write code once to target multiple platforms & OSes

Market Needs / Roadmap Drivers

Up to Qt 4.5

Cross-platform requirement

Improve developer efficiency

Qt 4.5

Better out-of-the-box experience for developers

Best possible runtime performance

Qt 4.6

Expanded support for embedded, smartphone development

Enablers for cutting edge UI development

Future direction

Developer & designer collaboration, declarative UI

Deeper support for web/native hybrid development

2008

2009

2010

Qt is hot in multiple screens today

Slate/Pad/E-Reader

- Windows XP/7 and/or Linux-based OS
- Create Qt-based SDKs and Applications/Services
- Multi-touch and Gesture

Key Success: Asus EEEpc, Skype Phone, E-Reader, EEE tablet

Home & Entertainment

- Chipset pre-integration
- Online Content and services delivery
- Performance and WebKit Integration

Key Success: TCL MiTV, NetFlix, CNTV

Mobile Applications

- Major improvements in overall performance
- Next generation mobile UI
- Nokia mobile platforms

Key Success: AccuWeather, Shazam, many on

Automotive Infotainment

- Connected & innovative user experience
- Terminal Model
- Qt for Windows CE

Key Success: Genivi, Visteon, MagnetiMarelli

Code less.

Qt Openness

First Step

Enter into new ERA - Qt is Now Open

Rationale for Nokia to add LGPL

- Make it easier for commercial users to choose Qt
- Increase Qt Ecosystem
 - Increase available Qt developer competence
 - Provide more business opportunities based on Qt
- Improve Qt through valuable feedback and community contributions

Open Qt Development Model

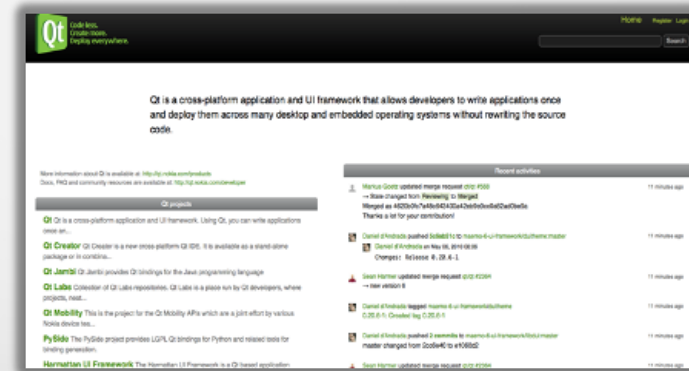

True Open Source project working model

- Development - Source Code management system
- Bug Track system
- Roadmap

Source Code Management System

- Git
 - A distributed revision control system
 - Used by Qt, Linux, Android, Gnome, Perl...
- Gitorious
 - A web based project host for collaborative open source projects using the Git distributed revision control system
 - Used by Qt, OpenSuse, MeeGo...
- Bring many interesting projects

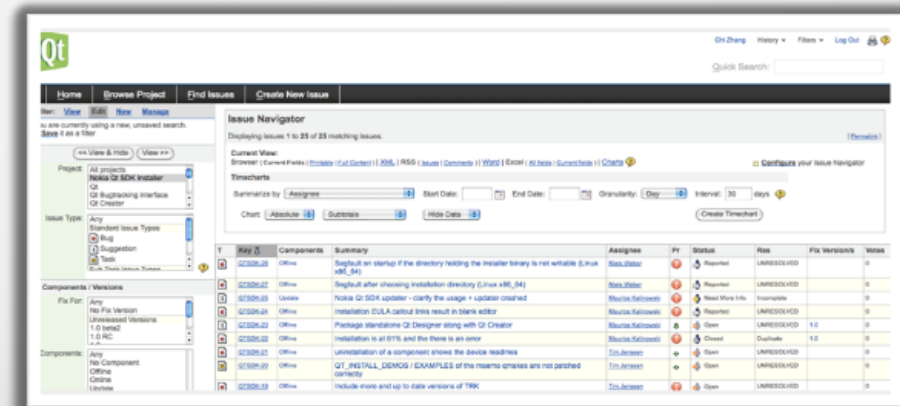

- [Qt for OpenSolaris](#) – Qt for OpenSolaris^[25]
- [Qt for Haiku](#) – Qt for Haiku OS^[26]
- [Qt for OS/2](#) – Still incomplete port to the OS/2 eCS platform.^[27]
- [Qt-iPhone](#) – Experimental development of Qt for the iPhone.^[28]
- [Android-Lighthouse](#) – Experimental development of Qt for Android.^[29]
- [Qt for webOS](#) – Experimental development of Qt for webOS on Palm Pre.^{[30][31]}
- [Qt for Amazon Kindle DX](#) – Experimental development of Qt for Amazon Kindle DX.^[32]

Bug Track System

You can

- Find a bug
- Report a bug
- Keep track of reported bug
- Vote a bug
- Both external people and Qt developers are working at the same system!

Roadmap

We open our product direction for discussion:

- Public Qt Roadmap
- Qt Labs
- Blogs
- Validation Meetings

Expected Delivery: 1st Half 2010	Expected Delivery: 2nd Half 2010	Active Research Projects
Improved performance <ul style="list-style-type: none">■ New metrics showing performance improvements	API Completeness  <ul style="list-style-type: none">■ Telephony Events API ■ Camera API ■ Service Framework ■ Landmarks API ■ Maps/Navigation API ■ Document Gallery API ■ Calendar API ■ Vibra API 	Framework research <ul style="list-style-type: none">■ Hybrid application development ■ Qt 3D portability API ■ New embedded Linux architecture  ■ Improved build system ■ Next generation widgets  ■ HTTP improvements for Rest ■ File IO improvements ■ OpenCL  
Enabling cutting edge UI development <ul style="list-style-type: none">■ Declarative UI programming  	Qt Tools <ul style="list-style-type: none">■ Smart Installer for Symbian ■ Continue and enhance Eclipse and Visual Studio plug-ins 	Tools research <ul style="list-style-type: none">■ Hybrid application development ■ Community and collaboration tools 

Qt Contributions & Workflow

Developers can submit patches and add-ons, or help jointly develop new features in Qt

Clone Qt on Gitorious

Make your modifications

Review & Agree Contribution Agreement

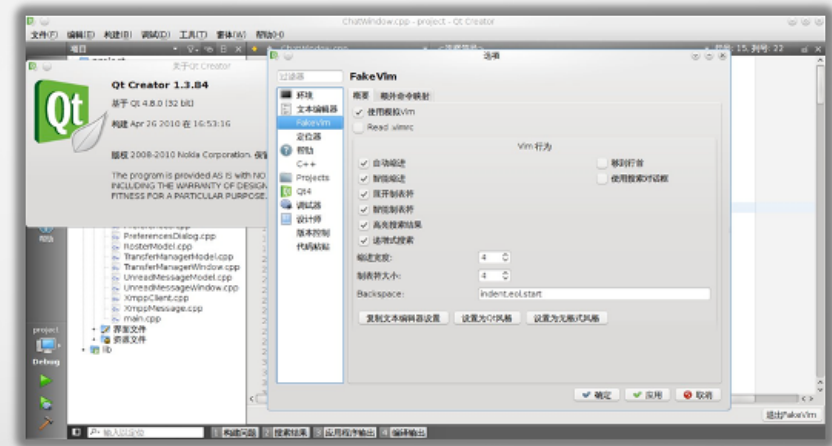

Submit for Merge

Reviewed by Qt Developers

Legal Scan

What can I contribute?

- You can contribute to Qt and Qt tools
- Suggestion list for discussion:
 - Performance improvements
 - Benchmark improvements
 - Optimizations for platforms / devices
 - Power-consumption optimizations
 - Localization!

Qt Governance

Evolving towards Transparency

What is Open Governance?

Planning in public

Technical & content discussions in public on mailing lists, IRC & wikis
Conclusions from off-line meetings are made available to the public

Development in public

Internal and external development happens the same way – in public
Degree of influence derives from level of contribution

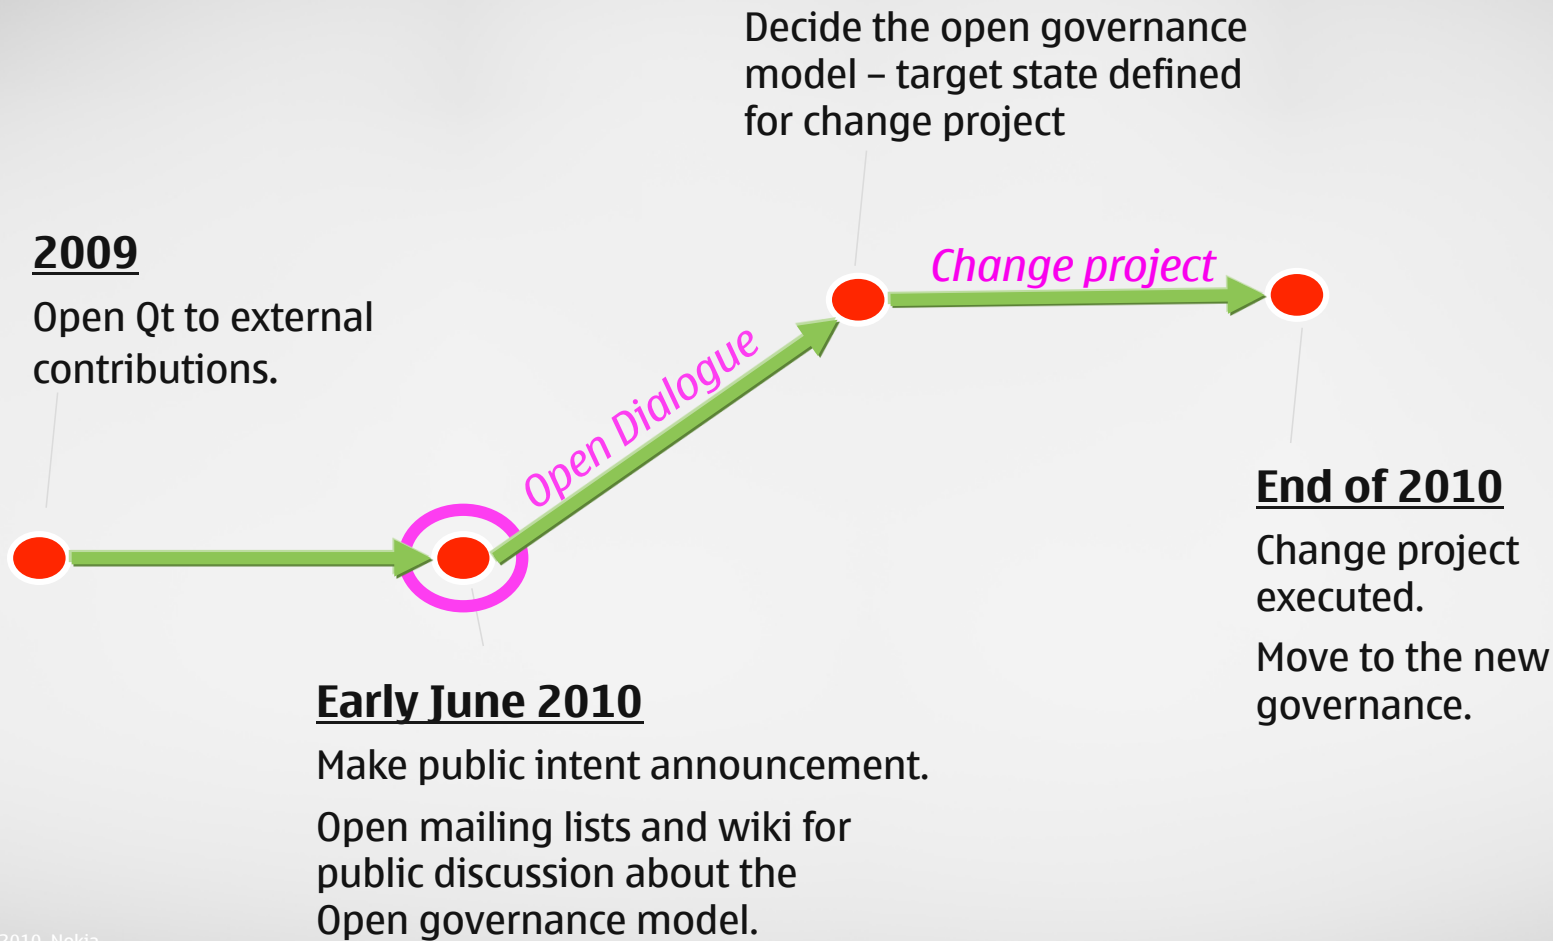

Merit-based authority

Authority to decide is given based on merits earned in the community, not
by your employer

Product info remains secret

Information about un-released products private, all other is in the open

Qt Roadmap to Open Governance

Benefits?

- Drive Qt for projects needs
- Have a hand in the control of Qt's evolution
- Freedom to innovate
- Fast path from contribution to productization (not relay on us)

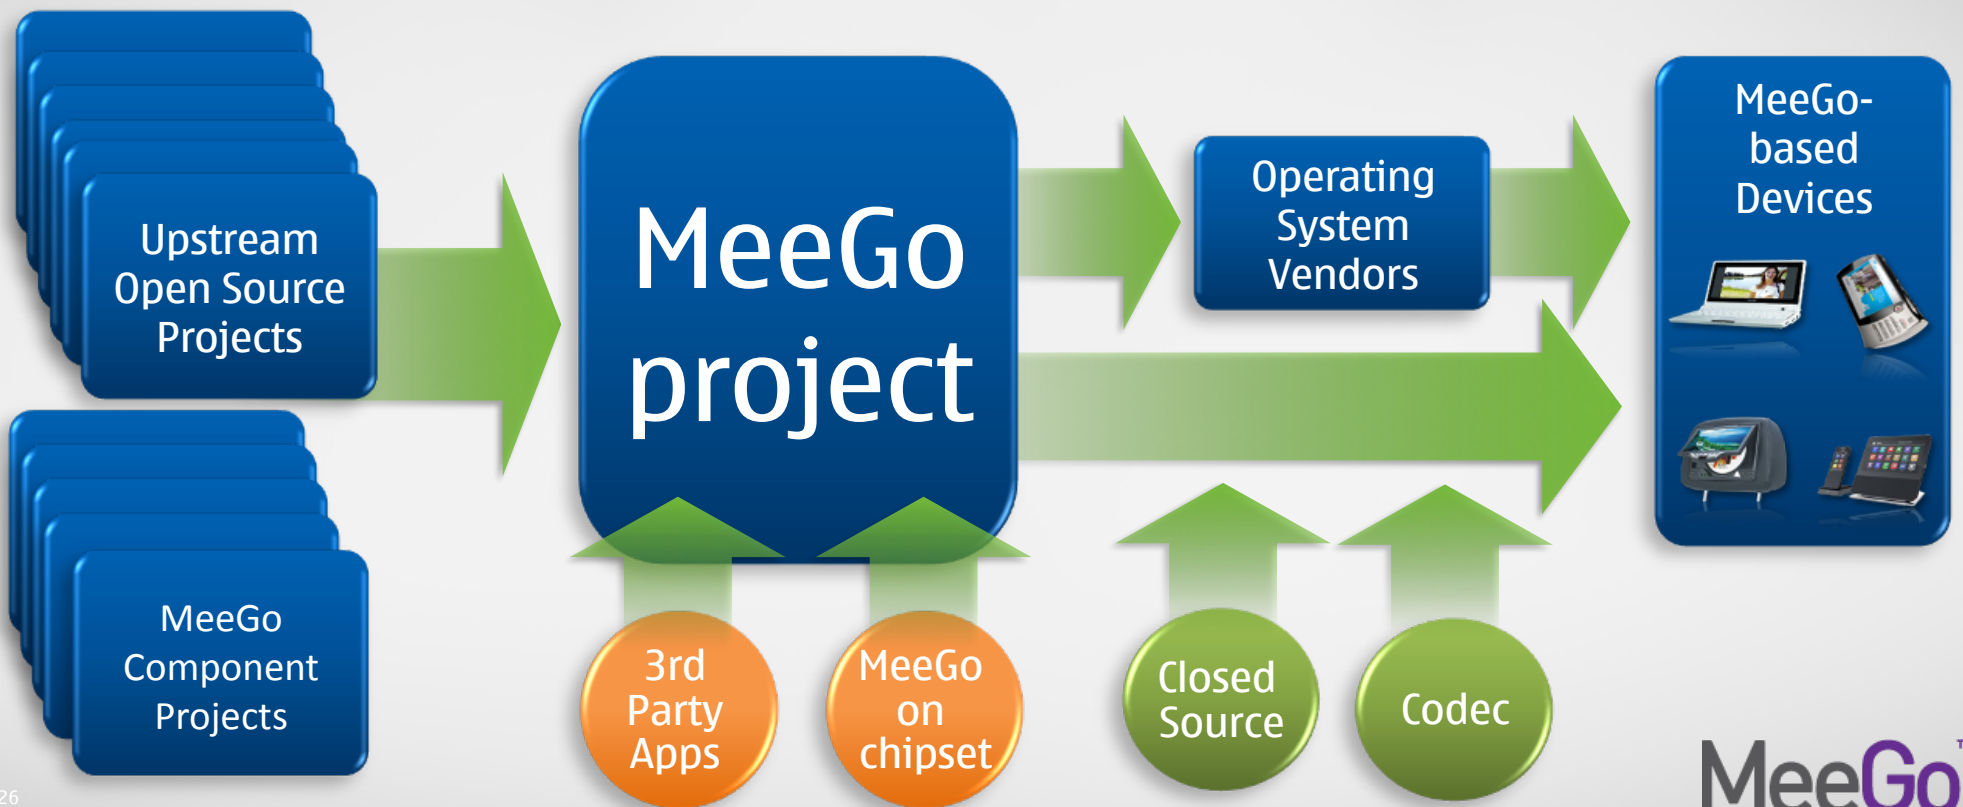

Code less.

Working Groups

- Working Groups are Delegates of the TSG
- WG responsibility
 - Defines the requirements
 - Release Management for the vertical UX
 - SW component licensing within overall MeeGo policy
 - Appoint leaders and maintainers for WG projects
 - Conflict resolution for WG projects
- Defines the vertical UX compliancy profile specification
- Liaison with institutions within the vertical industry

Technical Steering Group

- Membership and guidelines
 - Initial membership is Intel and Nokia, serving as co-chairs
 - Membership expands based on meritocracy, contributions, and commitment to MeeGo; expect to add 3 to 8 members to the TSG over the next year
 - All meetings of the TSG are open, and all TSG decisions and meeting minutes are published on the MeeGo project website
- TSG responsibilities
 - Appoint Project leaders, maintainers, and WG members
 - SW Compliance, Licensing and Trademark use
 - MeeGo Platform Advocacy and Outreach
 - Conflict resolution for projects
 - Represents the MeeGo project

Summary

Qt

MeeGo

**Both running under Open-Source model
Benefit each other**

- Cutting Edge graphic and web-enabled SDK
 - Cross-platforms applications development across desktop, web, mobile and embedded platforms and different screen size
 - Rich ecosystem of developers and applications/ services already existing
- Complete open OS stack for different device type
 - large pool of applications and services, through Intel AppUp and Nokia OVI Store
 - More innovation, smaller overhead, quicker time-to-market

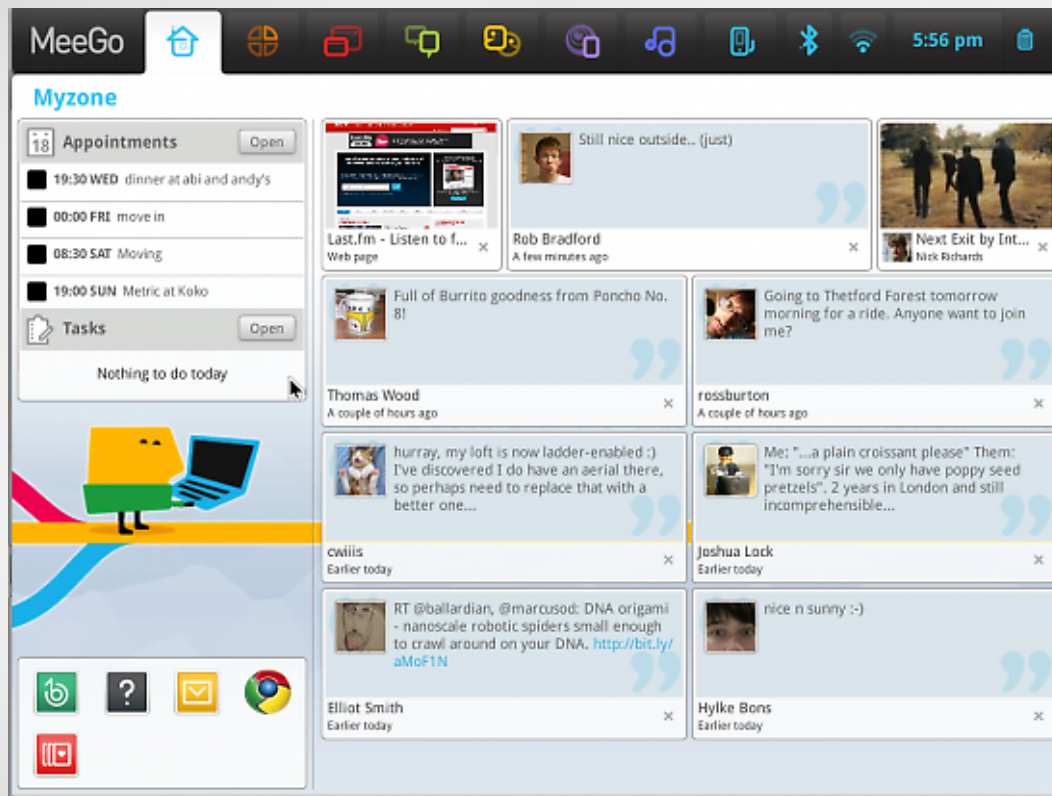

Code less.
Create more.
Deploy everywhere.

MeeGo Today

Netbook + Handset + IVI

First complete UX Profile MeeGo v1.0 Netbook

Visually rich user experience

Instant access to calendar, tasks, appointments, and social networks through the home screen.

MeeGo Handset UX Day 1

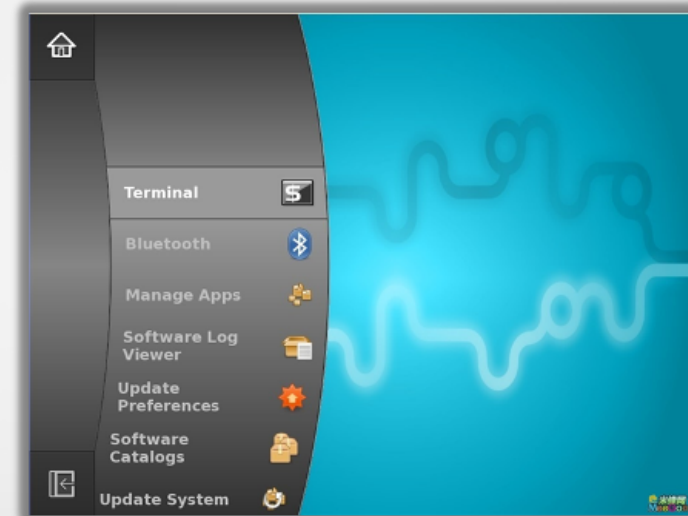

Running on both [Moorestone](#) and [N900](#)

Enhanced Qt framework - [MeeGo touch UI framework](#)

MeeGo IVI 1.0

Genivi select MeeGo

- GENIVI will be an active member of the MeeGo IVI working group.
- Because MeeGo is the best distribution for user centric devices where speed, size, power consumption and usability are key factors.
- Chosen by BMW, GM, Hyundai

Roadmap 2010

30 March 2010

**Code open of
MeeGo 1.0 OS**

26 May 2010

**MeeGo 1.0
Netbook UX
complete**

June 30 2010

**Code open of
MeeGo 1.1 Tablet
and Handset UX**

Q4

MeeGo 1.1 Core OS complete

**MeeGo 1.1
Handset UX,
Tablet UX,
Netbook UX,
In-Car- Infotainment UX
complete**
